Araceae Family

INTRODUCTION

Araceae family has total 8 homeopathically important remedies. Though it is a small family still it has its own characteristic features. The plants in this group, in their juices, contain an acrid principle in more or less quantity. They contain some irritant poison, causing inflammation of mucus membrane and destruction of tissue.

MORPHOLOGICAL STUDY

These herbs usually contain watery, acrid or milky juice. They are stemless shrubs with sympodial branches, climbing by aerial roots. The leaves in spirally herbaceous species, alternate solitary or radical, appearing without or after the flowers. The petiole is hermaphrodite, which is more or less completely enclosed in green color. Fruits are many, small and free. Seeds in each drupe are berry-like, small or large. Albumin is copious or scanty. Embryos axile are in exalbuminous genera, thick with plumule in a lateral slit. It has 107 genera and about 1000 species. The various species of the Anthurium, Arum and Philodendron are acrid and purgative and contain more or less stimulant or poisonous juices.

IMPORTANT REMEDIES

1. Arum triphyllum
2. Arum dracontium

3. *Arum italicum*
4. *Arum maculatum*
5. *Caladium seguinum*
6. *Pothos foetidus*
7. *Acorus calamus*
